

Usage of Social Media Services in Science

Dear participant,

Thank you for taking the time to complete this survey. The survey investigates to which degree scientists use various social media services and different kinds of available features **in order to aid their careers**. It is part of the DFG-funded research project **metrics*, which aims at enabling a better understanding of the manifold metrics for scientific influence, their origins and their meanings.

The data acquisition is done solely for scientific purposes. All answers will be coded anonymously and treated confidentially. Your participation is voluntary.

The survey is in English and will take about 15 minutes to complete. As an additional incentive, 250€ of Amazon vouchers will be awarded randomly to the participants (one 10€ voucher for each of 25 participants). In order to enter the drawing, just fill out the survey up to its end and then enter a valid email address on its final page.

To start the survey please click the button below. Please refrain from using your browser's back/forward buttons for navigating through the survey - otherwise your data might get lost.

Best regards
*The *metrics-project team*

Interactions on Web Services III

[] The just mentioned social media-related actions do not always express a positive stance - for example to share a post on Facebook does not automatically mean that the sharer thinks that post's content is highly relevant; it could also be shared because it is perceived as strikingly bad.

So, when you are performing the following actions, in how many cases does that indicate a positive stance on the respective target?
